

# New Energy Battery Pack to Solar Energy Storage

## Overview

---

When Tesla unveiled its next-generation energy storage systems—Megapack 3 and the new Megablock—on Septem, it marked a pivotal moment in the evolution of utility-scale battery energy storage. We expect 63 gigawatts (GW) of new utility-scale electric-generating capacity to be added to the U. This amount represents an almost 30% increase from 2024 when 48. 6 GW of capacity was installed, the largest. The federal Residential Clean Energy Credit covers 30% of qualified battery storage costs ( $\geq 3$  kWh capacity) for systems installed between 2022-2032. Additionally, states like California, New York, Massachusetts, Vermont, Hawaii, and Connecticut offer generous rebates or virtual power plant (VPP). Batteries account for 90% of the increase in storage in the Net Zero Emissions by 2050 (NZE) Scenario, rising 14-fold to 1 200 GW by 2030.
