

Niger rooftop solar power generation system

Overview

This project, funded by the World Bank through the International Development Association (IDA), will enable Niger to better balance its energy mix, which is currently largely dominated by thermal energy. Out of the 15 solar power plants, 12 are operational as of July 2023. The Niger Solar Electricity Access Project (NESAP), aimed at enhancing electricity access in rural and peri-urban areas of Niger through solar energy, started in 2017 and has built 15 solar power plants. The expected outcomes are: (i) solar-based electricity generation capacity is increased; (ii) household access to electricity via the grid and f renewable energy generation. Niger's solar power supply systems are transforming rural communities, powering businesses, and rewriting the rules of energy independence across the Sahel reg In a country where only 20% of the population has access to electricity, solar power isn't just an alternative – it's becoming a lifeline.
