

# North korea s industrial emergency energy storage power supply

## Overview

---

But here's something that might surprise you: satellite imagery from January 2025 revealed three new lithium battery storage facilities near Pyongyang's industrial zones. This isn't just about keeping lights on—it's a calculated move in a country where every kilowatt-hour counts. North Korea faces significant energy shortages primarily due to its reliance on coal and hydroelectric power, which have become increasingly inefficient and inadequate to meet the country's needs. The energy crisis has grown since the mid-1990s, exacerbated by a combination of isolationist. The Lee Jae Myung administration is ramping up efforts to deliver on the president's pledge to invest in energy storage systems (ESS), raising hopes that Korean battery makers will capitalize on this opportunity to overcome challenges from sluggish electric vehicle (EV) demand. To cope with the problem of no or difficult grid access for base stations, and in line with the policy trend of energy saving and emission reduction, Huijue Group has launched an. ect located in Dalsung, Daegu, South Korea. The rated storage capacity of the project is 9,000kWh. The project was an y, and are expected to reach 67GW and 35GW.
