

Off-grid solar containerized type for cement plants

Overview

Researchers have developed a solar-heated calcination plant to produce cement. Concentrated solar thermal (CST) is a potential replacement for 40%–100% of the thermal energy needed in a conventional cement plant. How a solar cement plant is designed?

Solar cement plant was designed based on cement production and the Direct Normal Irradiation (DNI) data available at plant. Green, carbon-free, sustainable solar energy solutions for cement factories to help build the planet's future. Throughout history and until the present period of unceasing progress, buildings and structures have been the bedrock of mankind's visual depiction of prosperity. "I am convinced we are getting closer to the technologies that will enable net-zero CO₂ cement and concrete production," said Fernando A.

Off-grid solar containerized type for cement plants

Design of solar cement plant for supplying thermal energy in cement

In the present work, the authors have attempted to design a solar cement plant for supplying solar energy to the cement industry. A case study was done, which investigated a ...
