

# Pakistan wind power plant power system

## Overview

---

Pakistan's wind power capacity is approximately 1,845 MW as of 2025, generated from around 36 operational wind projects. The Gharo-Jhimpir wind corridor in Sindh province is the heart of wind power generation, contributing over 70% of the country's wind energy capacity. Wind power is a form of renewable energy in Pakistan which makes up more than 6% of the total electricity production in the country. Due to increasing concern for global warming, it is important that while looking for alternative means of generating electricity. Wind energy, derived from the kinetic energy of moving air masses, holds tremendous promise as a clean and sustainable energy source in Pakistan.
