

# Photovoltaic Wireless Onsite Energy Solar

## Overview

---

Wireless Photovoltaic (PV) technology involves generating electricity from solar panels and then transmitting that power wirelessly to a point of use, eliminating the need for traditional cables and wiring, and is being explored for various applications including powering wireless. Wireless Photovoltaic (PV) technology involves generating electricity from solar panels and then transmitting that power wirelessly to a point of use, eliminating the need for traditional cables and wiring, and is being explored for various applications including powering wireless. Conventional solar PV can be installed as a ground mounted array, on a rooftop, carport, covered parking, or other location at the facility depending on aesthetic or structural considerations. PV-thermal hybrid solar collectors (PVT) can provide simultaneous generation of hot water and electricity. Reduce utility costs, achieve energy independence and meet your sustainability goals by generating your own on-site power—and even selling surplus energy back to the grid. For each kilowatt-hour (kWh) the onsite solar asset produces, a kWh of consumption will be offset for a buyer of renewable energy, or offtaker. These systems are often described as “behind the

## How Onsite Solar Can Transform Your Energy Strategy , Trio

Onsite solar is an asset located where the renewable energy generated will also be consumed. There are three main types of onsite solar: rooftop, ground-mount, and carport.
