

Photovoltaic bracket processing for fishery-light complementary

Overview

The photovoltaic fishpond is a method for culturing fish by using a fish light complementary mode, the fish light complementary mode is characterized in that fishery culture and photovoltaic power generation are combined, a photovoltaic panel array is erected. The photovoltaic fishpond is a method for culturing fish by using a fish light complementary mode, the fish light complementary mode is characterized in that fishery culture and photovoltaic power generation are combined, a photovoltaic panel array is erected. The invention belongs to the field of fishery culture, and particularly relates to a photovoltaic bracket for a photovoltaic fishpond and a use method thereof. The fishery complementary photovoltaic (FPV) power plant is a new type of using solar energy by PV power plant in China. The studies of the impact of FPV on the balance of both radiation and energy flux have been less. As coastal cities face increasing energy demands, a surprising solution has emerged from combining photovoltaic (PV) bracket technology with marine lighting systems. Therefore, humidity, lon The main function of the fishing light complementary photovoltaic bracket is to erect the. It needs to be studied from the perspective of industrial ecology Carry out systematic research, fully consider the synergy, matching and complementarity between fishery production and photovoltaic power generation, establish an aquaculture technology system according to the requirements of green.

Photovoltaic bracket processing for fishery-light complementary

GRADE A BATTERY

LiFePO4 battery will not burn when overcharged or discharged, overcurrent or short circuit and can withstand high temperatures without decomposition.

Effects of fishery complementary photovoltaic power plant on

The fishery complementary photovoltaic (FPV) power plant is a new type of using solar energy by PV power plant in China.
