

Photovoltaic bracket punching and feeding method

Overview

The application relates to a punching and forming production line of a photovoltaic bracket C-shaped steel, which comprises a feeding device, a punching device, a forming device, a cutting device and a discharging device which are sequentially arranged, wherein a first. The application relates to a punching and forming production line of a photovoltaic bracket C-shaped steel, which comprises a feeding device, a punching device, a forming device, a cutting device and a discharging device which are sequentially arranged, wherein a first. h first and then form. An automatic line is equipped with 2 people. It is often used to build multi-purpose brackets in the field of. No need to change any forming rollers. 22~26. High quality pv solar bracket punching and cutting machine, Single cutting multiple times, large daily production capacity, higher efficiency than conventional automatic aluminum cutting machine and manual punching equipment

Product Description

Equipment Features

1. Comprising a 3-in-1 Decoiler Straightener Feeder, a Stamping Press, and a Cold Roll Forming Machine, this line adopts a “Pre-Punching. Drivers to improve PV O& M include the following: increase efficiency and energy delivery (kWh/kW), decrease downtime (hours/year), extend system lifetime (say from 25 to 40 years), reduce cost of O& M (\$/kW/year), ensure safety and reduce risk, enhance appearance, and meet requirements of.

Photovoltaic bracket punching and feeding method

CN116833326A

The application relates to the technical field of machining equipment, in particular to a punching and forming production line for C-shaped steel of a photovoltaic bracket.
