

Photovoltaic bracket structure

Overview

The bracket is set up with long and short legs before and after the bracket, and the legs are bolted to the foundation respectively, one end of the diagonal brace is supported at the foot of the long column, and the end of the middle part is a diagonal beam, and the. The bracket is set up with long and short legs before and after the bracket, and the legs are bolted to the foundation respectively, one end of the diagonal brace is supported at the foot of the long column, and the end of the middle part is a diagonal beam, and the. The installation structure of solar photovoltaic brackets should be simple, strong and durable. The materials used to manufacture and install photovoltaic arrays must be able to withstand various harsh environments at the project site to ensure 25 years of weather resistance and corrosion. A PV bracket is a support structure that arranges and fixes the spacing of PV modules in a certain orientation and angle according to the specific geographic location, climate, and solar resource conditions of the PV power generation system construction. As an important part of the PV power. Our photovoltaic bracket structure explanation diagram set reveals what engineers won't tell you over coffee. The general materials include aluminum alloy, carbon steel, and stainless steel.

Photovoltaic bracket structure

Commonly used solar steel bracket structure type

Single-column PV support structure mainly consists of key components such as main beam, secondary beam, front support, rear support, steel column, hoop and monopile foundation, etc.
