## Overview

---

This form outlines the procedures and costs for decommissioning solar photovoltaics (PV) at the end of its operational life. It ensures that the site is restored to a safe, stable, and environmentally compliant condition. This typically occurs after 20-25 years when panels begin to degrade and produce less electricity. The process involves the careful removal of all. They help facility owners direct their way through detailed requirements and develop a full solar farm takedown plan.
