Overview

The short circuit current, or I_{sc} , serves as the absolute maximum current value a photovoltaic (PV) module can generate under specific conditions. This value is measured by directly. Power delivered by the PV cell is the product of voltage (V) and current (I). At some point in between (around the knee point) the delivered power is a maximum. In solar PV systems, short circuits can happen due to: Line-to-Line Fault: Occurs when two conductors of different phases or the same phase come. Short-circuit current, often referred to as I_{sc} , is an important parameter in the field of solar energy systems.
