

# Photovoltaic panels collected

## Overview

---

The most common devices used to collect solar energy and convert it to thermal energy are flat-plate collectors. Solar radiation may also be converted. The United States Large-Scale Solar Photovoltaic Database (USPVDB) provides the locations and array boundaries of U. photovoltaic (PV) facilities with capacity of 1 megawatt or more. Solar cells are typically made from a material called silicon, which generates electricity through a process known as the photovoltaic effect. Solar inverters convert DC electricity into AC electricity, the electrical current appliances run on when plugged into a standard wall socket.

## Solar thermal collectors

A highly reflective collector focuses, or concentrates, solar energy onto an absorber. The collector usually moves throughout the day so that it maintains a high degree of concentration on the absorber.
