

# Photovoltaic panels have serious color difference

## Overview

---

According to research from the National Renewable Energy Laboratory (NREL), colored solar panels can be about 10-20% less efficient than traditional black or blue panels. This is because darker colors absorb more sunlight, converting it into electricity more effectively. Yes, solar panels can come in different colors, although black and blue are the most common due to their high efficiency. Black, blue, gray, even semi-transparent. each color tells a story.

## Photovoltaic panels have serious color difference

### Panels have slightly different colors : r/photovoltaics

Photovoltaic cells generally have a color difference between dark blue and light blue. Module manufacturers will classify cells of different colors when inspecting incoming materials to ensure that ...
