

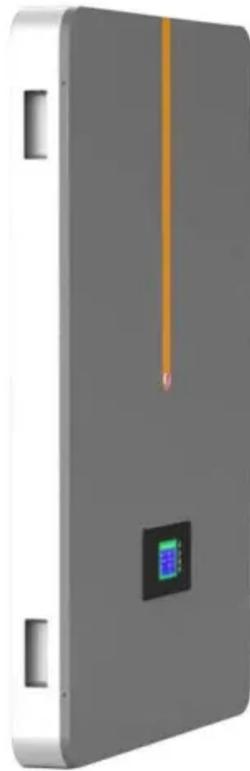

Photovoltaic panels on dog farm

Overview

Solar panels provide essential shade, reducing heat stress in farm animals and improving their well-being. Elevated ground. The USDA Animal and Plant Health Inspection Service advises never to expose a pet to temperatures below 45 degrees Fahrenheit or above 85 F for more than a few hours — and you should never keep a pet outdoors long-term. According to PETA there were nearly 100 extreme cold or heat-related pet deaths. Agrivoltaics refer to growing crops, building pollinator habitats or raising livestock underneath solar panels. It allows for renewable energy systems and agriculture to occur on the same piece of land. What are the benefits?

Agrivoltaic systems can improve land use by allowing you to produce more. Though installing solar may give your farm a financial edge, how will it affect the earth around it?

The short answer is it really won't. Most solar panels, and all the solar panels Paradise Energy installs, are made from silicon.
