

# Photovoltaic panels plus step-down module

Solar Panel

Hybrid Inverter

Lithium Battery

Battery Cabinet

## Overview

---

Optimize solar panel performance with the MPPT Solar Controller. Featuring a DC to DC 5A step-down buck converter, this module offers constant voltage and constant current for efficient power supply management. D300S created to allow your EP500/Pro, AC300 to have a chance to connect with Roof/Rigid panels for 2400W Max. If you need help with ordering, shipping, troubleshooting, expanding your system, warranty issues, or anything else you have questions about for as long as you own your. The voltage and current limits are 155 Voc and something like 11 amps, and thus not suitable for direct connection to your typical modern roof mounted solar panels. You can't connect these panels in parallel because you will exceed the input current limits ( panels are around 10 amps ) and if you. Applicable Models: AC300/EP500/EP500Pro [Click To Download Bluetti D300S User Manual](#) You can earn BLUETTI BUCKS (Value about €) for completing your purchase . To connect a DC-DC step-down module to a solar panel, you must ensure compatibility with voltage levels, employ appropriate wiring techniques, and implement necessary protections for stability and safety. Designed for seamless voltage regulation, the D300S safely converts 120V-500V DC input from.
