

# Price quote for large-scale pv distributions used at us ports

## Overview

---

The analysis shows the following 2020 evolutionary PV system price estimates, which are compared with the price targets for 2020 set under the U. Department of Energy's SunShot Initiative: • \$2. The Base Year estimates rely on modeled capital expenditures (CAPEX) and operation and maintenance (O&M) cost estimates benchmarked with industry and historical data. Capacity factor is estimated for. Each year, the U. solar photovoltaic (PV) systems to develop cost benchmarks. Photo credit: Intersect Power's 415 MWDC/320 MWAC Radian. NLR's Distribution Grid Integration Unit Cost Database contains unit cost information for different components that may be used to integrate distributed solar photovoltaics (PV) onto distribution systems. The database is focused on hardware and software costs and contains more than 335 data points. Our analysis indicates that power purchase agreement (PPA) prices are not expected to decrease significantly in the foreseeable future.
