

Qinneng photovoltaic double glass panel

Overview

The double glass module, as the name implies, is a construction in which the typical aluminum frames and back sheet substrate are replaced by another glass panel. All contents in this manual are intellectual properties of QINNENG which originates from long term of technical exploration and experience accumulation of QINNENG. This installation manual does not entail any explicit or implicit quality warranty and does not stipulate on compensation schemes for. Glass-glass module structures (Dual Glass or Double Glass) is a technology that uses a glass layer on the back of the modules instead of the traditional polymer backsheet. This means the panels last longer and keep working well. The glass lets light go through to the back. Compared to traditional glass-backsheet modules, they offer greater durability and environmental resistance.

Qinneng photovoltaic double glass panel

Double-Side Glass Technology in PV Systems: Benefits, ...

Double side glass technology makes bifacial panels special. These panels have glass on both the front and back. The glass keeps the solar cells safe inside. Regular panels have glass only ...

Double the strengths, double the benefits

Traditional solar panels typically feature a glass front and a polymer backsheet. In contrast, double glass modules replace the polymer layer with another glass sheet, creating a robust ...
