

# Ranking of lithium battery energy storage rate in the United States

## Overview

---

Each quarter, new industry data is compiled into this report to provide the most comprehensive, timely analysis of energy storage in the US. All forecasts are from Wood Mackenzie Power & Renewables; ACP does not predict future pricing, costs or deployments. by an agency of the U. Media inquiries should be directed to. This battery storage update includes summary data and visualizations on the capacity of large-scale battery storage systems by region and ownership type, battery storage co-located systems, applications served by battery storage, battery storage installation costs, and small-scale battery storage. Due to increases in demand for electric vehicles (EVs), renewable energies, and a wide range of consumer goods, the demand for energy storage batteries has increased considerably from 2000 through 2024. Energy storage batteries are manufactured devices that accept, store, and discharge electrical. Batteries became the main energy storage technology in the United States in 2024, surpassing hydro pumped storage. was projected to reach almost 30 gigawatts by the end of 2024. The United States Energy Storage Market Report is Segmented by Technology (Batteries, Pumped Hydro Storage, Hydrogen Energy Storage, and More), Capacity Rating (Up To 1 MWh, 1 To 10 MWh, 10 To 100 MWh, and Above 100 MWh), Installation (Front-Of-The-Meter and Behind-The-Meter), Application.

## Ranking of lithium battery energy storage rate in the United States

---

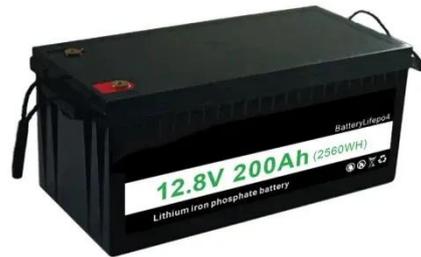

### US Energy Storage Market Size & Industry Trends 2031

The Energy storage systems in the United States market saw batteries secure 81.7% of installed capacity in 2025, leveraging lithium-ion packs that cost USD 271 per kWh for utility-scale ...
