

# Rolls-Royce Microgrid Verification

## Overview

---

Rolls-Royce has commissioned a €5 million Microgrid Validation Center for its MTU product and solution brand at the company's Power Systems headquarters in Friedrichshafen, Germany. The center will run simulations of microgrids of various dimensions and configurations. The MTU microgrid system combines environmentally friendly renewables and gensets with batteries and a control system for intelligent energy management. Microgrids are defined as small-scale power networks that can function autonomously or collaboratively with other power grids – often more. Renewable energies that cannot be ramped up and down at will. They provide grid stability, voltage and frequency control, instantaneous power, plus the ability to de-couple peaks in generation from both cost and the operator's environmental footprint. In this white paper learn how tying multiple power systems together with intelligent controls is integral when installing a microgrid. Our EnergyPack Battery Energy Storage System (BESS) is a key component for improving the reliability and profitability of.
