

# Seismic-resistant mobile energy storage container for ships from Algiers

## Overview

---

Our storage systems feature seismic-resistant, moment-resisting reinforcements, offering the strength and flexibility to evenly distribute seismic forces and absorb energy without collapsing. Our container structure according to ASCE 7-16. The analyzed structure consists of five identical modules stacked on top of another. There are two variants of the structure: one with eccentricity. Even though shipping containers are constructed from high-strength Corten steel, they must be properly engineered, reinforced, and anchored to withstand seismic activity and comply with seismic building codes. The batteries and converters, transformer, controls, cooling and auxiliary equipment are pre-assembled in the self-contained unit for 'plug and play' use. The system may be transported, stored, and operated in a plurality of containers, each of which may be CSC approved ISO shipping. Atlas Copco has developed a 10 ft and 20 ft container as an Energy Storage System, designed to meet the requirements of both off and on grid applications. Ideal for use in renewable power plants.
