

Overview

This bad odor, often described as a reeks of sulfur or a stench of rotten eggs, is a common issue that many people face. They are brand new and only cycled a couple of times and stored in a closed cabinet. However, after a few days inside the cabinet it smells really bad when I open the door. What could be the problem?

Is the smell dangerous?

Hello, don't worry, this is the smell of electrolyte inside the battery. A strange odor from your solar roof or wiring is more than just an inconvenience; it is a critical warning sign. Ignoring these smells can lead to significant safety hazards, including electrical fires or system failures. Its likely being overcharged, either because your controller is bad, or the battery has a dead cell that won't take a charge, and your controller is trying to charge it, which is boiling the other good cells. Batteries generate heat during charging and discharging cycles.
