

# Solar module panels produced in Honiara

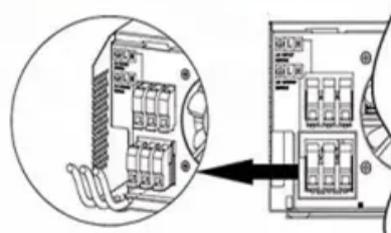

**Parallel** (Parallel operation up to 6 unit (only with battery connected))

**AC input wires**

**AC output wires**

## Overview

---

Honiara's tropical climate and growing energy demands make bifacial solar panels a game-changer. Unlike traditional solar panels, bifacial modules capture sunlight on both sides, boosting energy output by 20–30% in regions with high albedo surfaces like sand or light-colored rooftops. An entrepreneur secures the ideal plot of land for a new solar module factory in Honiara, with a robust business plan, financing in place, and clear demand for locally produced solar panels. However, one of the most significant operational risks may not lie in the supply chain or the labor market. Honiara, the capital city of Solomon Islands, is situated in a tropical location that offers consistently favorable conditions for solar energy generation throughout the year. Approximately 90% of the electricity produced is diesel generated. The one megawatt solar PV plant, which was expanded from 600kW following a grant from the New Zealand Ministry of Foreign. With over 2,800 hours of annual sunlight, Honiara's tropical climate makes it perfect for solar photovoltaic panel installations. With typical solar installations taking two to three month e design principles.
