## ENERGY STORAGE SYSTEM

**Product Model**  
HJ-ESS-215A(100KW/215KWh)  
HJ-ESS-115A(50KW 115KWh)

**Dimensions**  
1600\*1280\*2200mm  
1600\*1200\*2000mm

**Rated Battery Capacity**  
215KWH/115KWH

**Battery Cooling Method**  
Air Cooled/Liquid Cooled

The image shows a tall, grey Energy Storage System (ESS) unit. It has a black top and bottom. Two vertical green lines run down the front. In the center, there is a blue hexagonal shape with a black lightning bolt symbol. The letters 'ESS' are printed in green at the top right of the unit. At the bottom, there are two yellow warning triangles with lightning bolts.

## Overview

---

Solar farming can be profitable, with average returns of 10-15% annually. Initial setup costs range from \$800 to \$1,200 per kW of capacity while operating costs are typically low. Revenue depends on local energy prices and solar irradiance levels. Department of Energy (DOE) Solar Energy Technologies Office (SETO) and its national laboratory partners analyze cost data for U. solar photovoltaic (PV) systems to develop cost benchmarks. This work has grown to include cost models for solar-plus-storage systems. NLR's PV cost benchmarking work uses a bottom-up. Utility-scale solar costs have declined dramatically to \$0. 23 per watt in 2025, less than half the \$2. Capacity factor is estimated for. Table 1 represents our assessment of the cost to develop and install various generating technologies used in the electric power sector.

The Bottom Line  
Even with the massive strides made in technological innovation, sustainable energy has not yet replaced traditional fossil fuels. To incentivize renewable energy adoption, governments have levied tax credits for solar and wind energy, which until recently, were far more expensive than the status quo. Due to increas...
