

Solar panels generate electricity to pump water to the fish pond

Overview

Floating solar pond pumps are designed to provide a renewable energy source for circulating water in a pond. Most solar-powered pond pump kits come with panels that produce around 20 watts of power, which is enough to push out roughly 160 to 360 GPH, depending on the model and conditions. That's workable for small water features or shallow ponds where the goal is just to keep things gently moving. That's equivalent to driving 1,200 miles in an average car. It has a separate air pump and solar panel, making it work better.
