

Solar panels of Kola photovoltaic power station

Overview

With an enhanced installed capacity of 1 million kilowatts, the Kela PV Power Plant features more than 2 million PV modules and connects to the Lianghekou Hydropower Plant through a 500-kV transmission line, combining solar and hydropower to maximize power efficiency. The project covers an area of around 16 million square meters, equivalent to 2,000 standard football fields. With countries around the world setting environmental goals to reduce carbon emissions and achieve carbon neutrality. Conceived by the Design and Research Institute of PowerChina Chengdu in 2016, the Kela photovoltaic (PV) power station project officially commenced construction in July 2022. The Kela station is also the first phase of the hydro-solar complementary project of the Yalong River Lianghekou Hydropower Station.

Solar panels of Kola photovoltaic power station

World's largest hydro-PV station now operating in China

China is a global leader in developing renewable energy, and the Kela photovoltaic (PV) power station is adding to the country's energy mix as the world's largest hybrid solar-hydropower ...
