

# Solar photovoltaic panel size and power

## Overview

---

Residential solar panels come in a compact size with about 60 cells or 120 half-cells per module. 7 meters tall and one meter wide, these panels are simple to lift and place on rooftops. Panel “Size” vs Physical Dimensions: The most critical distinction for homeowners is that solar panel “size” refers to electrical output (measured in watts), not physical measurements. A 400W panel has the same physical footprint whether it produces 350W or 450W – the difference lies in cell. Whenever you want to find out what the standard solar panel sizes and wattages are, you encounter a big problem: There is no standardized chart that will tell you, for example, “A typical 300-watt solar panel is this long and this wide. For specific sizing and installation recommendations, it will be good to consult with a professional solar installer.
