## Overview

---

All solar farms connect to a specific point on the electrical grid, the vast network of wires that connects every power generation plant to every home and business that consumes power. That point is called the “point of interconnection,” or POI. The purpose of this article is to give you a basic understanding of the concepts and rules for connecting a solar panel system to the utility grid and the household electrical box or meter. The POI is different for utility-scale versus. Professional Installation is Critical: Grid-tied solar systems require licensed electricians and multiple permits, with the interconnection process typically taking 2-8 weeks and costing \$200-\$2,000 in fees alone. Load-Side Connection Dominates Residential Installations: The 120% rule limits total. How to install solar panels on electric poles The installation of solar panels on electric poles can be accomplished through a series of organized steps involving careful planning and execution.
