

Solar power generation with desktop computer

Overview

This article will guide you through building a practical and efficient solar-powered workstation ideal for your off-grid setup. Lets look at what you need for your workstation starting with the solar panel array, battery storage, charge controller, and inverter. Our computer is one of the primary uses of energy in the home - not only are desktop computers energy-hungry, but many of us use them for long hours during the day and even overnight. Our local power grid isn't. What is the best way to run desktop computer from solar?

I have avoided having to use dc-ac inverters so far but is that too much to ask for a desktop pc?

I have managed to get my laptop and phone to charge direct from my fuse block with a respective voltage regulator for each. Another way is to use solar panels to convert sunlight into electrical energy, which can then be used to power the computer. On average, a desktop computer uses around 60-250 watts of power.
