

Solar power pays for itself

Overview

In the United States, home solar panels generally take between 7 to 10 years to pay for themselves in utility electricity costs avoided. This payback period depends on many factors, including local electricity rates, available incentives, and the total costs of the installation. Determining your potential savings can be difficult to conceptualize and calculate if you've never installed solar before. To help you see how much you could save, this. With falling solar panel costs, rising electricity prices, and the growing importance of personal energy independence, solar continues to deliver major financial benefits in the form of tens of thousands of dollars in savings—with or without the tax incentive. Most homeowners starting their solar. Recent national research shows homes with solar systems sell for 6. In practical terms, that means an average boost of \$25,000 in resale value. The answer to both questions is yes. Energy costs continue to go up, making it more expensive to power your home than ever before.
