

# Solar power station network controller

## Battery String-S224

- 1C Charge/Discharge
- Easy configuration and maintenance
- Power supply can be single battery string or parallel battery strings

## Overview

---

A Power Plant Controller (PPC) is used to regulate and control the networked inverters, devices and equipment at a solar PV plant in order to meet specified setpoints and change grid parameters at the Point of Interconnect (POI). PPCs utilize advanced control software to efficiently operate the plant and maintain grid stability while adhering to regulatory requirements. Site operators can communicate these setpoints and parameters to the. TMEIC's Power Plant Controller is the central intelligence of a Solar Ware® installation, monitoring and managing up to 255 inverters across multiple power channels.
