

# Solar power weed problem solved

## Overview

---

But here's the kicker: what if the weeds themselves are just part of a bigger problem?

A 2024 Solar Maintenance Report found that uncontrolled vegetation reduces PV panel efficiency by 15-22% annually. Most solar farms still use manual labor or. Tall weeds growing around the panels can create shade, causing the solar power generation system to drop. There is also the danger of spot heating. Solar Panels Efficiency Issues. Solar panels sometimes Cannabis prohibition drove a culture of clandestine production in the past and solar helped growers to cultivate it at remote, off-grid sites. Now, as a global commercial cannabis. One alternative is to relocate cultivation outside, relying on natural sunshine for illumination and wind for ventilation. And if you can drain the water off--that will help--grass cannot grow where there is no soil moisture. A chemical like glyphosate kills most weeds and grasses.
