

# Spiral pile photovoltaic panels

LIQUID/AIR COOLING

PROTECTION IP54/IP55

PCS EMS

BATTERY /6000 CYCLES

## Overview

---

Photovoltaic spiral ground piles are steel (or composite) piles with spiral blades. They are installed underground through a rotary press-fit method, eliminating the need for excavation and maintenance. In photovoltaic project foundation engineering, spiral ground piles, with their advantages of "no excavation required, quick installation, and strong load-bearing capacity," have become a key alternative to traditional concrete foundations. They are particularly well-suited for photovoltaic. The spiral steel pile foundation, also known as the steel anchor, is an increasingly widely used form of photovoltaic support foundation. Improve installation efficiency and reduce environmental impact. The foundation construction of traditional solar power stations is usually fixed by concrete pouring or heavy. This guide is tailored for pile driving contractors and engineers involved in solar farm projects—providing an in-depth exploration of the techniques, materials, and challenges associated with pile driving in this growing sector. The system can achieve minor adjustment onsite with special design of Anchor Plate to adapt to different sites, and is mainly applied to medium to large scale solar PV.
