

Sri Lanka s weather station uses ultra-large capacity photovoltaic shipping containers

Overview

Programs are underway to automate the weather station with modern instruments in collaboration JICA and meteorological department of Sri Lanka. Solar energy is used worldwide and is increasingly popular for generating electricity or heating and desalinating water. Solar power is generated in two main ways: Photovoltaics (PV), also called solar cells, are electronic devices that convert sunlight directly into electricity. 72 billion in 2025 and is projected to grow at a CAGR of 9. This expansion is fueled by rising demand across industrial, commercial, and technology-driven applications. Sri Lanka is currently facing a severe energy crisis, which partially stems from the insufficient exploitation of indigenous renewable energy resources, in turn leading to continued high reliance on imported fossil fuel. Driven by the need to enhance energy security, reduce dependency on fossil fuels, and achieve ambitious renewable.
