## 12.8V 200Ah

## Overview

---

Iran's Supreme Council for Economic Coordination (SCEC) has approved the allocation of \$1.5 billion for the installation of solar panels in response to the country's ongoing energy crisis. TEHRAN – Iran has launched a program to provide portable solar panels to all its nomadic households, requiring them to pay only 10 percent of the cost, a senior official from the Organization for Nomadic Affairs announced. Dariush Nematollahi, the director-general for production improvement, said. The Iranian government has unveiled a sweeping energy transition initiative to decouple all state institutions from the national power grid, prioritizing off-grid photovoltaic (PV) systems to tackle chronic electricity shortages and accelerate renewable energy adoption. Iran has significant potential for renewable energy, with 60,000 MW of solar capacity and 30,000 MW of wind potential. National targets aim to install 30,000 MW of renewable energy by 2030. Although Iran is one of the world's largest producers of fossil fuels, the Islamic Republic has increasingly focused on renewable energy to address its growing domestic energy shortfall and environmental challenges.
