

# The community is suitable for solar photovoltaic power generation

## Overview

---

Community solar is a solar energy deployment model that allows multiple customers to buy or lease portions of a larger, shared solar photovoltaic (PV) system. Neither the United States Government nor any agency thereof, nor any of their employees, nor any of their contractors, subcontractors or their employees, makes any warranty, express or implied, or assumes any legal liability or responsibility for the accuracy, completeness, or any third party's use. This slide deck provides an overview of community solar. Community solar is one of the fastest. The article emphasizes the importance of these steps by illustrating how they collectively enhance project viability, foster community involvement, and align with economic, environmental, and social goals, ultimately promoting sustainable energy solutions. In a world increasingly focused on. A community solar farm is a shared solar power installation that lets many people benefit from one solar array. 6 gigawatts of cumulative capacity installed across 44 states as of 2025, community solar is addressing the needs of the 80% of Americans who cannot access rooftop solar.
