

The giant of wind power generation

Overview

With a capacity to generate 15 megawatts of power, the Vestas V236-15.0 MW is the largest and most powerful wind turbine as of 2025 to have been commercially deployed. included the 13-megawatt GE Vernova Haliade-X installed (but subsequently destroyed) off the coast of Nantucket and the smaller 11-megawatt Siemens Gamesa SG 11.0-200 DD wind turbines installed at the South Fork Wind Park. While these are. News about switching to greener energy sources is always good news, and this certainly counts: The world's largest wind turbine constructed to date is now up and running and contributing to the power grid in China. The global wind energy market size was US\$89.7bn in 2024 and is expected to reach US\$260.
