

The logic of solar power generation

Overview

Solar cell When sunlight strikes a solar cell, an electron is freed by the photoelectric effect. The two dissimilar semiconductors possess a natural difference in electric potential (voltage), which causes the electrons to flow through the external circuit, supplying power to the. The amount of sunlight that strikes the earth's surface in an hour and a half is enough to handle the entire world's energy consumption for a full year. The flow of. Solar power works by converting energy from the sun into power. It's a renewable energy source derived from sunlight, which is abundant and consistent in most regions globally.

The logic of solar power generation

Solar Energy

There are several ways to turn sunlight into usable energy, but almost all solar energy today comes from "solar photovoltaics (PV)." Solar PV relies on a natural property of "semiconductor" ...
