

The main structure of photovoltaic support

Overview

The pre-assembled triangle is the main element to create the supports with overhang or flat roof. It is delivered with pre-assembled and mechanised parts to modify their angle of inclination. There are two types of pre-assembly: for modules mounted vertically and for modules mounted. The support structures are the elements that allow the fixing of the modules on the roofs where the photovoltaic installation must be housed, constituting a main element of the solution. In order for the generated electricity to be useful in a home or business, a number of other technologies must be in place. At the heart of every solar setup is a mix of mechanical and electrical parts.

The main structure of photovoltaic support

- LiFePO₄
- Wide temp: -20°C to 55°C
- Easy to expand
- Floor mount&wall mount
- Intelligent BMS
- Cycle Life:≥6000
- Warranty :10 years

Design and Implementation of PV Mount Systems

This system serves as the structure that supports photovoltaic modules and directly impacts the stability, safety, and power generation efficiency of the photovoltaic power station.

Product Model
HJ-ESS-215A(100KW/215KWh)
HJ-ESS-115A(50KW/115KWh)

Dimensions
1600*1280*2200mm
1600*1200*2000mm

Rated Battery Capacity
215KWH/115KWH

Battery Cooling Method
Air Cooled/Liquid Cooled

Mechanical Performance and Stress Redistribution Mechanisms in

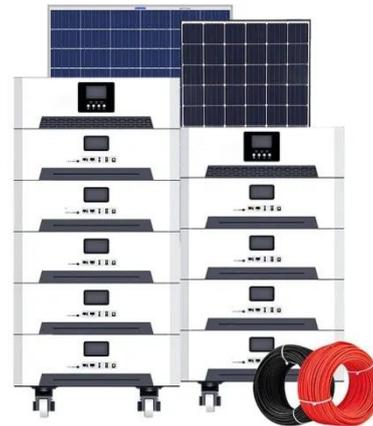

This study involved the analysis of a photovoltaic power generation project in Hubei Province to compare differences in the structural loads of photovoltaic supports as outlined in ...
