

The most places to produce photovoltaic panels

Overview

China leads the world as the top producer of solar energy, installing more than 350 GW of photovoltaic (PV) capacity in 2024. The EU, the United States, India, and Pakistan are also ranked as top solar producers. A gigawatt (GW) is a unit of measurement of electrical power. For a 2025 snapshot, this page uses the latest fully consolidated year of PV module production (2024) and treats it as the best proxy for the 2025 manufacturing landscape.

Manufacturing Renaissance Driven by Policy Support: American solar manufacturing has reached a critical milestone in 2025, with domestic factories now capable of producing enough panels to meet nearly all U.S. demand. Over \$36 billion in investments and 44,000 new manufacturing jobs. The United States has made strides in positioning itself as one of five leaders in solar energy production, along with China, the European Union (EU), India, and Pakistan, as ranked by the International Energy Agency. ¹ Although solar power was once considered a niche market, countries are proving. According to the International Energy Agency Snapshot 2024, China alone accounted for over 60% of new global photovoltaic capacity in 2023, with the top 10 countries collectively representing a significant majority of the market.
