

The price of grid frequency regulation energy storage

Overview

It typically costs between \$10 and \$60 per megawatt hour. Back to The ESA Blog. This text explores how Battery Energy Storage Systems (BESS) and Virtual Power Plants (VPP) are transforming frequency regulation through fast response capabilities, advanced control strategies, and new revenue opportunities for asset owners. When the demand for electricity fluctuates throughout the day, the power grid must be continuously adjusted to ensure a consistent frequency.

The price of grid frequency regulation energy storage

Frequency Regulation

By nature, frequency regulation is a "power storage" application of electricity storage. It has been identified as one of the best "values" for increasing grid stability and is not considered "an ...
