

# The solar inverter will be shut down by others

## Overview

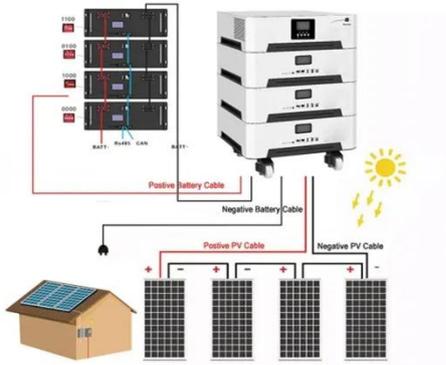

---

If an inverter keeps shutting off it is often for safety reasons. Other possible reasons are incorrect parameters, lack of power and damaged circuits. It produces AC that matches the grid waveform. “Islanding” is a pocket. In November 2024, several major news outlets, including Reuters, and The Times (UK), reported a vague but alarming incident: that solar power inverters in the United States were remotely disabled from China, raising fears of embedded “kill switches” and foreign control over U. In this guide we will explain why this happens and what you can do about it. Over the years, I've seen countless cases. Can your solar inverter be shut down remotely?

In late 2024, reports emerged that numerous Deye-branded inverters stopped working across the U., Canada, and beyond — all showing the same lockout message: “This inverter is not allowed in this region.”
