

# The solar panel is attached behind the glass

## Overview

---

When solar panels are placed behind standard glass, several things happen:

**Reflection:** A portion of sunlight bounces off the glass and never reaches the panel. **Diffusion:** Light is scattered and becomes less concentrated.

**Absorption:** Some energy is absorbed by the. **Short answer:** Yes, solar panels can work through glass, but the efficiency drops significantly. If you're thinking about installing solar panels indoors or behind a window, there are a few important technical and practical factors to understand before moving ahead. This topic is relevant to homeowners, architects, builders, and anyone interested in renewable energy solutions. The simple presence of a transparent barrier complicates the energy.
