

# There is a communication base station battery near the house

## Overview

---

When base stations are located close to users, the transmitter power required by the mobile phone and the base station to communicate is relatively low. While we depend on these towers for communication and connectivity, the growing number of these structures near homes and neighborhoods raises concerns for many individuals about the potential health risks. So, how close is too close to a cell phone tower?

And what are the possible hazards of. Communication base station batteries are critical components that ensure uninterrupted service, especially in remote or challenging environments. These batteries offer reliable, cost-effective backup power for communication networks. They are significantly more efficient and last longer than lead-acid batteries. At the same time, they're lighter and. Base station (or base radio station, BS) is - according to the International Telecommunication Union 's (ITU) Radio Regulations (RR) [1] - a " land station in the land mobile service.
