

Togo New Energy Photovoltaic Site

Overview

Togo is advancing its clean energy goals with the construction of a 42MW solar PV plant in Sokodé, set to become the country's largest solar facility. This project is a key part of Togo's strategy to transition to renewable energy and achieve its ambitious goal of 50% renewable energy in its power. Togo, a small West African nation, is poised for a significant boost in its renewable energy capacity. In May 2025, the African Development Bank (AfDB) approved a financing package of €26. Last week, a technical workshop was held in Lomé to design the competitive process for the project's implementation. A flagship project is the Dapaong solar.
