

# Trimming equipment for photovoltaic panels

## Overview

---

This process involves a number of steps and specialized equipment, such as taping and trimming machines. But what exactly does a taper or trimmer do?

Today we take a closer look at these two solar module machines as part of our ongoing series on solar module production equipment. An automatic trimming machine is used to automatically remove burrs and exceed materials from PV module edges after lamination. With its capability to handle different module dimensions—including standard. Used for edge trimming of laminated PV modules to remove excess encapsulation film, glass burrs, or backsheets overflow, ensuring clean edges and precise dimensions. Features synchronized four-side cutting for smooth, damage-free edges. 4 unit drivers control 4 cutter heads, move in all directions with 8 cutter. Lifetime of knife 50000times 4.
