

# UAE container refrigerated power generation

**2MW / 5MWh**  
**Customizable**

## Overview

---

Reefer containers do not have their own power source and electricity must be provided to run it either through the ship's power supply or through the locations electrical system. Securing valuable, temperature-sensitive assets within the challenging climate of the United Arab Emirates demands more than mere refrigeration; it requires a guarantee of uninterrupted power and environmental control. At Rental Generators, we transcend the conventional limits of logistics. Refrigerated containers (reefers) rely on generator sets (gensets) for power when transported or stored without access to a fixed electrical grid, such as during sea, rail, or road transit. They are fuel-efficient, rugged, and compatible with global container standards. What is a Genset for Reefer Containers?

A genset, short for generator set, is a portable power unit. Keeping the demand of our clients in mind, we are engaged in offering a wide gamut of Reefer Container.
