

University Solar Power Technology

Overview

There are two main types of solar energy technologies—photovoltaics (PV) and concentrating solar-thermal power (CSP). In January 2024, Treasury Secretary Janet Yellen visited Roxbury Community College (RCC) in Boston, Massachusetts where she toured the school and learned about its ambitious clean energy projects. RCC has built a novel “tri-level renewable solution” on its campus. A system of geothermal wells. Photovoltaics (PV) is the science and technology of converting sunlight directly into electricity using semiconducting materials, and the most common device that utilizes this technology is the solar cell. It's a very large, public, four-year university in a large city.
