

Use plastic basins to make generator blades

Overview

Use a stiff plastic pipe to make the wind turbine blades, and cut it into sections. Then divide these sections into quadrants and saw them to create four blades. NOTE: This was a proof of concept project, just to show that it is possible to use the casting from an old washing machine to make a rotor, This project is now on hold until I finish my VAWT and other projects I am working on. The idea came to. This Homemade Wind Turbine Generator Rotor & Blade Assembly using PVC Pipe DIY project were designed to introduce homesteading readers to method for building a homemade rotor and blade assembly for a wind turbine generator using PVC pipe. The blades can be made from various. Here is a picture of the blades that are after they are cut. - Alrighty first thing you will do is to lay the 8" PVC down lengthwise on a level surface with a 4ft level against the side. This will allow you to make a straight line down the side horizontally with a Sharpie marker. It sounded easy enough, so I decided to try and design my own.
