

# What are the EMSs for global communication base stations

## Overview

---

It is a satellite-based, global wireless personal communications network designed to permit any type of narrow band wireless transmission (i. ; voice, data, fax, or paging) to reach its destination nearly anywhere on Earth. United States government departments and agencies can take immediate advantage of unlimited voice and narrowband data for an unlimited number of subscribers through a multi-year contract between Iridium and the United States Space Force. What contract did Iridium receive from the U. Space Force?

Iridium received a five-year IDIQ contract to support. SITH follows the Gateway Evolution Contract awarded to Iridium in 2019, extending work on core ground infrastructure that supports Department of Defense use of the Iridium network. Iridium's satellite network provides global voice, data, and positioning, navigation and timing services intended to. The US Space Force (USSF) CSCO Enhanced Mobile Satellite Services (EMSS) PMO provides United States Government (USG) and other sponsored customers with satellite communication services through a dedicated, EMSS-controlled gateway. The EMSS gateway communicates with the commercial Iridium. The Iridium System is the first commercially available, cross-linked, pole-to-pole global Mobile Satellite System (MSS).
