

# What material is the photovoltaic plastic bracket made of

## Overview

---

Our brackets are made of a high quality plastic material: Nylon, or Polyamide, glass fiber loaded to 30%. The same type of material is used in the automotive sector for components that reside in the engine hood. The plastic term is not synonymous with low quality! Commonly plastic is associated with products not very durable but when we talk about technical items we must emphasize the existence of various types of plastic material: from the waste, cheaper and fragile (a few cents per kg) to the most. So what components are photovoltaic bracket accessories made of?

1. Bracket A system used to support photovoltaic cell modules. Steel is one of the most popular materials for photovoltaic brackets, and for good. Aluminum is one of the most popular materials for adjustable solar brackets due to its numerous beneficial properties. It is lightweight, which makes it easy to handle and install, reducing labor costs and installation time. But wait, there's a catch: its strength only reaches 70% of steel's capacity. Not ideal for high wind zones! "We've seen aluminum brackets fail at 90mph winds in Texas—steel held up 38% better in.
